

CASE STUDY

Clariant

Customer Care Innovation Center

LOCATION

New Providence, NJ

Creating a beautiful showcase for clients while simultaneously being an effective workspace for employees was Clariant's goal for their new facility.

The state-of-the-art environment consists of inspiring spaces, a demonstration room, a high-tech application and claims laboratory, a testing center where lab results can be correlated with actual consumer perceivable testing, and a collaboration space for interactive and creative thinking.

PROJECT STATS + HIGHLIGHTS

955+

linear feet DIRT
wall system installed

5 weeks

to build 14,600 sq ft
of lab and office spaces

9,360 lbs

of construction waste
diverted from landfills

ARCHITECT

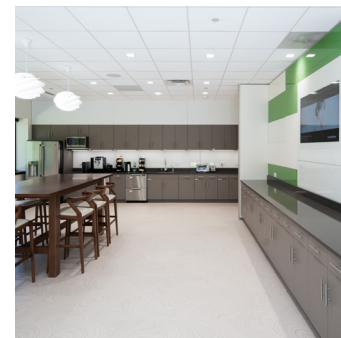

Jarmel Kizel

GENERAL CONTRACTOR

Unity Construction

“ Clariant and I appreciate the beautiful space you helped create. The consensus is very positive...people love it and feel proud to host customers there. Thank you for delivering a quality, forward thinking, responsibly built space for us. This project was a successful collaboration...the end result is fantastic! ”

We installed 955+ linear feet of DIRT™ manufactured wall systems in and 305 linear feet of DIRT™ millwork to reduce initial construction schedule from nine weeks to five.

A collaborative effort, we were able to build an environmentally responsible space that is modern, innovative and a great space to work and host customers.

We coordinated with dancker's Workplace Technology Group to seamlessly integrate digital displays, presentation, video conferencing, and audio conferencing systems. We also assisted with providing film and imaging services, installation of 40 linear feet of Switch film on glass walls and wallcovering over DIRT™ soffit in lab area.
