

## CASE STUDY

# Jefferson Health

### LOCATION

Philadelphia, PA

## The Honickman Center at Jefferson Health sets a new standard for healthcare facility innovation.

Located in the heart of center city Philadelphia, the Honickman Center was meticulously crafted to enhance the patient experience. Our ForBuild team collaborated closely with the Jefferson Hospital, DIRTT, Stantec and LF Driscoll to build out eight floors of exam rooms, team rooms, storage, and restrooms. Our unique approach to modular prefab provided the client with design freedom to deliver on current programmatic needs and the flexibility to evolve the space in the future. As healthcare requirements shift, upgrades or alterations can be easily implemented with minimal disruption and significantly reduced costs.

### PROJECT STATS + HIGHLIGHTS

**8 floors**    **45,583 lbs**    **8 months**

of prefabricated systems for  
350 exam rooms, 50 bathrooms,  
team rooms & storage

of construction waste  
diverted from landfills

to install
