

CASE STUDY

Corgan NYC

LOCATION

NYC

Corgan came to us for a reconfiguration and addition to their existing NYC office.

They were working against a tight move-in timeline, but our team knew we'd be able to turn their request around quickly using DIRT. Our design team reviewed the existing installation in place and provided shop drawings for their team to review and approve. Upon receiving the manufactured solution, our installation team was able to complete the full install in only two days, with zero punchlist items. This time savings allowed other trades to get into the space earlier to complete and conduct a final walkthrough before move-in with time to spare.
